

System Builder Cheat Sheet

This cheat sheet walks you through the Flair System Builder—key steps, what to prepare, and tips to get the right system recommendation.

Zoning & Air Balancing

For central systems with vents

WHAT YOU NEED

- Know your existing devices (thermostats or room sensors in each room)
- Measure your supply vents (use a ruler/tape measure or a phone app for hard-to-reach vents—[Measure](#) [iPhone] or [AR Ruler](#) [Android])

STEPS

1	Select floors + number of rooms
2	Name rooms + identify existing devices
3	Select comfort issues: <ul style="list-style-type: none"> • Select: <i>Too hot / Too cold / No issue</i> when both heating and cooling
4	Enter email or skip to recommendation
5	Review room-by-room recommendations: <ul style="list-style-type: none"> • Understand why each device is recommended • Take a screenshot or notes for install reference
6	Measure each supply vent: <ul style="list-style-type: none"> • Measure each vent individually (sizes vary by room)
7	Enter vent sizes + quantities per room
8	Review final system
9	View cart & checkout

Ductless Controls

For mini splits & window ACs

WHAT YOU NEED

- Know your indoor units (type and number of mini splits, window, or portable AC units)
- Check your remote compatibility - if the remote displays temperature, fan speed, and mode, it's compatible with Flair

STEPS

1	Select configuration (wire-free or wired)
2	Add type + number of indoor units
3	If not mini splits: <ul style="list-style-type: none"> • Confirm remote compatibility
4	Enter email or skip to recommendation
5	Review recommended system: <ul style="list-style-type: none"> • Take a screenshot or notes for install reference
6	View cart & checkout
